ABOUT THE BOOK

Primarily environmental geography is the branch of geography that majorly deals with the study of the earth's components such as; the earth's atmosphere, lithosphere, hydrosphere and biosphere, with the aim of solving environmental problems/issues that we have been facing. And such problems include- environmental pollution; waste management and disposal; over-exploited earth natural resource; and natural disasters etc. As such, environmental geography may be defined as that branch of geography which studies the characteristics, compositions and functions of different components of the natural environmental system, mutual interdependence of different components, various processes that link the components, the interactions of different components with each other and among themselves and consequent responses (environmental problems) in spatial and temporal context in terms of 'geoecosystem.'

ABOUT THE AUTHOR
